

A Commitment to Environmental Responsibility

At GMN Refrigeration Ltd, we take pride in being a responsible company operating in the refrigeration and air conditioning industry. With a comprehensive range of services, including design, sales, service, installation, and commissioning, we strive to provide quality solutions to our clients, who include several large and well-respected companies. Our commitment lies not only in delivering high-quality services but also in continually improving our environmental performance.

Compliance with Legislation and Codes of Practice

One of our primary objectives is to ensure compliance with all current legislation and codes of practice. We understand the importance of staying current with the regulations governing our industry. We conduct regular audits to assess our adherence to these standards to achieve this. Furthermore, we emphasise the need for our workforce to maintain the highest level of technical qualifications, specifically in areas that may have a potentially damaging impact on the environment.

Prevention of Pollution and Waste Minimization

We uphold the fundamental principles of pollution prevention and waste minimisation. We aim to evaluate our operations and make them as efficient as possible to minimise waste generation. We actively avoid using toxic and environmentally damaging materials whenever feasible to achieve this. Additionally, we have stringent measures in place to prevent the accidental release of any polluting substances. We believe in the power of recycling and actively encourage it to reduce our impact on the environment.

Integrating Environmental Concerns into Planning and Design

At GMN Refrigeration Ltd, we understand that sustainable development is critical to a greener future. Hence, we integrate environmental concerns into all our planning and design decisions. Doing so ensures that our projects align with sustainable development principles wherever possible. This approach allows us to contribute positively to our surroundings and minimise negative environmental impacts.

Fleet Efficiency and Power Requirements

We recognise that our fleet plays a significant role in our environmental footprint. We carefully select and use our fleet to address this, considering both efficiency and environmental impact. By choosing energy-efficient vehicles with low emissions, we strive to minimise the carbon footprint associated with our operations. We also acknowledge the importance of the power source for our fleet and actively seek out alternative, cleaner options.

Encouraging Environmental Responsibility

At GMN Refrigeration Ltd, we believe in the power of collective action. We actively encourage our customers, suppliers, subcontractors, retailers, and recyclers to adopt the same environmental principles we uphold. By forming partnerships with like-minded entities, we aim to create a network of environmentally responsible stakeholders who can make a significant difference in protecting our planet.

Staff Environmental Awareness and Education

Our commitment to environmental responsibility extends to all levels within our organisation. We recognise the importance of staff ecological awareness and understanding. To achieve this, we have implemented a comprehensive training program to educate and engage our staff

in operating in an environmentally responsible manner. By enhancing their awareness of environmental issues, we empower them to actively contribute towards improving our company's overall performance.

Continual Improvement

As a responsible company, we understand the importance of continually improving our performance. Therefore, we regularly review our environmental policy, objectives, and practices. Through this review process, we identify areas where we can enhance our environmental performance and take appropriate action. We strive to be at the forefront of implementing sustainable solutions within our industry and lead the way in minimising our environmental impact.
